Figure 3 of US-A-4,507,658 shows a hollow conductor 36 at 38 in the vicinity of a rotating blade 24 and of a guide blade disposed not far behind. The invention according to independent claims 1, 2 and 14 proceeds herefrom, an arrangement being used between the rows of rotating blades or guide blades for more precise monitoring. Such a "development" of the turbo machine appears to be surprising and therefore claims 1-17 are considered to satisfy the criteria in PCT Article 33(2) to (4).

Claims 1 and 2 should be combined. As a result of the word "for" in claim 14, the claimed arrangement appears not to be necessary (PCT Article 6).
